

Cultivar	Actual height	Qty	Planted	Comments	Easy to grow	Problems
Acer Palmatum	7-8 ft	2	In ground	By far the easiest to grow. Tolerates heavy pruning. No pest problems	Easy	some bark with scorch damage for excessive sun exposure
Sangu Kaku	7-8 ft	2	In ground	Mixed results. I lost one due to excessive water and pests (1st year). They're grown fast last year.	Easy to moderate	Sun scorch, and Leaf sunburn (summer). Lot of die back on thinner branches but it recovers easy.
Butterfly	7-8 ft	3	In ground and cedar containers	The specimen in ground outgrow the container ones in a proportion of 4-1.	Easy to moderate	Sun scorch, and Leaf sunburn (summer). In container I got a lot of die back on thinner branches with severe pest and fungus problems last year. Also black spots on trunk. Traded with Bayer systemic product.
A. J. Aconitifolium	4 ft	2	Cedar containers	Amazingly sturdy. No problems at all. Both grows very well. Tolerates fairly well high temperatures. My favorite tree.	Easy	Minimum leaf scorch.
A.S. Autumn Moon	2 & 3 Gal sizes	3	Cedar containers	Nice, but a lot of dieback. I like a lot, but not a good performer.	Hard	Severe Dieback. Affected by heat (even in total shadow and well watered). I tried everything, without good results. Very difficult to grow here.
A.S. Full Moon	2 & 3 Gal sizes	2	Cedar containers	This is my favorite, but sadly is frustrating and extremely difficult to grow.	VERY Hard	Lost first 2 that I got. I have two more that seems heading same way.... @\$%\$!!
A.P. Katsura	3 ft	1	Cedar containers	Excellent performer. Bark nice, not problems until now. Good grow rate.	Easy - Partial sun.	No problems.
